

Your Security

The security of your personal information is Zaptag's highest priority. We at all times respect the sensitivity of your personal medical information and we operate to protocols and procedures that enforce this.

One of the key benefits of a Zaptag account is that the subscriber is the data controller, who decides who has access.

Our security is implemented as follows.

1. Zaptag Medical Card

We utilise 256 bit encryption using the users email and password as the key to encrypt all of the data that is stored. The synchronisation to the Zaptag Online health account utilises Web Services over a secure SSL connection.

SSL (**Secure Sockets Layer**) is the leading security protocol on the Internet. Developed by Netscape, SSL is widely used to do two things: to validate the identity of a Web site and to create an encrypted connection for sending credit card and other personal data. Look for a lock icon at the top or bottom of your browser when you order merchandise on the Web. If the lock is closed, you are on a secure SSL or TLS connection.

2. Zaptag Online

The Online Health Account uses SSL for all access to the Zaptag Online service. Importantly, all data stored in the database online is encrypted as well using a strong key.

3. Surgery / Practice Integration

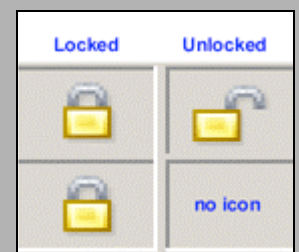

All data transmitted from the surgery / practice again utilises Web Services over SSL and all data is encrypted where possible for additional security.

Note: A strong key is a basically a strong password that is used to encrypt the data. We refer to it as a strong key if it cannot be guessed or cracked through frequency analysis. A strong key will be as random as possible with as many combinations of different characters.

For further information please refer to our Privacy Policy and Terms and Conditions at www.zaptag.com

Security Priorities

1. Confidentiality
2. Accessibility
3. Safety
4. Robustness
5. Dependability
